

Nate Stott

Software Engineer · Computer Scientist

Logan, Utah, USA

+1 (801) 708-3373 | nate.stott@pm.me | natestott.net | funkybooboo | nate-stott1

Summary

Software Engineer II at Progress Software building the query engine that runs the Domo platform, working across Java, C++, and Go services. MS Computer Science candidate at Utah State University with published research in IEEE and ACM. Strong advocate for clean architecture, test-driven development, and twelve-factor methodology. Linux power user with hands-on systems programming and full-stack engineering through personal projects.

Skills

Languages	Python, JavaScript/TypeScript, Java/Kotlin, C/C++, Rust, C#, Go, Ruby, Bash/Zsh, SQL, HTML/CSS, Lua, Haskell, Nix, Dart, x86 Assembly.
Backend	SpringBoot, Django, Flask, Rails, .NET/ASP.NET, Node/Express, Hono, Gin, Tokio; REST APIs, GraphQL, WebSockets, gRPC, OAuth 2.0, SAML, OpenID Connect.
Frontend	React (Query, Native), Vue, Svelte/SvelteKit, Next.js, Electron, Jetpack Compose, Flutter; Tailwind, Bootstrap, Sass; Webpack, Vite, ESBuild.
Data Engineering	Databricks, Snowflake, BigQuery, Kafka, Elasticsearch; ETL pipelines, data warehousing, stream processing.
Databases	PostgreSQL, MySQL, MongoDB, Redis, SQLite, DynamoDB, Neo4j, Pinecone, Qdrant; ORMs (Hibernate, SQLAlchemy, Prisma, Drizzle, Entity Framework, SeaORM).
Cloud & DevOps	AWS (EC2, S3, Lambda, RDS, ECS/EKS, CloudFormation); GCP (Compute, Cloud Run, Functions); Azure (App Service, AKS, DevOps); Cloudflare (Pages, Workers, D1, R2, KV); Hetzner Cloud, Backblaze B2; Docker, Kubernetes, Terraform; Jenkins, GitHub Actions, GitLab CI/CD; Traefik, Nginx, Apache; Keycloak, OAuth/OIDC; Datadog, Sentry, LogRocket.
AI/ML	PyTorch, TensorFlow, NumPy, Pandas, SciPy, Scikit-learn, Gymnasium; LSTMs, neural networks, reinforcement learning; OpenAI API, Hugging Face, Ollama.
Development Tools	Git, GitHub, GitLab, Neovim, JetBrains, VS Code; Docker Compose, Postman, Selenium, Cypress, Playwright; Jest, JUnit, pytest, Vitest; mise, Nix flakes.
Systems	Linux (Arch, NixOS, Debian, RHEL, Omarchy), FreeBSD, Windows, macOS; systemd, QEMU/KVM, VMware, Multipass; Proxmox VE, TrueNAS Scale; SSH, Tailscale, OpenSSH.

Experience

Progress Software	American Fork, Utah
Software Engineer II	Sep. 2026 - Present
- Promoted to Software Engineer II after Progress Software's acquisition of Domo, continuing on the same data core team building the query engine that runs the Domo platform. - Ship features across Java, C++, and Go services covering DataSet ingestion, query execution, and data transformation, owning work end-to-end with increased autonomy and less oversight from senior engineers.	

Domo

Software Engineer I · promoted from Software Engineer Intern

American Fork, Utah

Sep. 2025 - Sep. 2026

- Build and ship features across Domo's data core — the query engine that runs the entire platform — working across Java, C++, and Go services covering DataSet ingestion, query execution, and data transformation.
- Implement Debezium-based CDC pipelines for real-time data replication, wiring change event streams across distributed data sources.
- Track down CRIs spanning Adrenaline DataFlow, Domo's custom database internals, and multi-service call stacks, fixing correctness bugs and improving query execution performance at the storage and processing layer.
- Join customer support calls to diagnose live data integration failures, translating deep technical findings into fast resolutions that unblock customers.
- Represented the data core team at Domopalooza — Domo's annual user conference — engaging with enterprise customers and showcasing platform capabilities.
- Promoted from intern after leading a team of 3 to consistent sprint delivery and shipping production connectors to BigQuery, Snowflake, Redshift, and Databricks with OAuth, schema mapping, and cursor-based pagination.

Utah State University

Graduate Teaching Assistant

Logan, Utah

Aug. 2025 - Apr. 2026

- Deliver lectures and labs for CS5110 (Multi-Agent Systems) and CS3450 (Introduction to Software Engineering), exceeding traditional TA responsibilities with direct instruction.
- Mentor students on software development best practices, design patterns, and real-world engineering challenges, preparing them for professional careers.
- Achieved 95% student satisfaction rating through organized study groups and office hours; nominated for TA of the Year 2025.

Provider Resources Inc

Junior Software Engineer

Erie, Pennsylvania

Oct. 2024 - Sep. 2025

- Championed Test-Driven Development (TDD) adoption, increasing code coverage from 40% to 85%.
- Led Docker containerization initiative, reducing deployment time from 2 hours to 15 minutes and improving environment consistency across 5 development teams.
- Migrated team from Azure DevOps to GitHub with CI/CD pipeline automation, reducing build times by 35%.
- Architected workflow automation solutions using n8n and custom scripts that removed recurring manual work across departments.
- Developed full-stack internal applications using .NET (C#) and React, delivering 8 production features.

Projects

khem — Prebiotic Chemistry Simulator

Creator & Maintainer · M.S. Thesis Project

Utah State University

2026 - Present

- Building a zero-dependency Rust simulation of 3D worlds of atoms: ten real elements with real valences and electronegativities, bonds forming and breaking by Boltzmann probabilities against real bond-energy tables, steered by VSEPR geometry and validated against a measured five-gate ladder from stability toward replication and selection.
- Designed a Verilog-style hardware description language for matter (.kem) that composes worlds bottom-up from element to molecule to strand to cell, with deterministic byte-identical seeded runs and a one-JSON-event-per-line output contract.

Artisan Commerce — Serverless E-Commerce Platform

Creator & Maintainer

Personal Project

2026 - Present

- Architected a serverless edge platform for artisan e-commerce with a SvelteKit frontend and a Hono backend on Cloudflare Workers, featuring queue-based capacity management for made-to-order goods and under \$5/month operating cost.
- Built the data and storage layer on Cloudflare D1 and R2 with an adapter-pattern architecture ensuring zero vendor lock-in, and a TDD workflow (Vitest + Playwright) targeting 85%+ code coverage.

Erledigen — Full-Stack Task Management

Creator & Maintainer

Architected a full-stack task manager as a TypeScript monorepo with a SvelteKit (Svelte 5) frontend and a Bun backend, using an adapter-pattern architecture with a repository pattern for data access.

Shipped real-time WebSocket sync, natural-language recurring tasks and habits, and a keyboard-first command palette on an OpenAPI API validated with Zod, tested via Bun's test runner, Playwright E2E, and Bruno API tests.

Personal Project

2024 - Present

LazyCSV — Terminal UI for CSV Files

Creator & Maintainer

Built a blazingly fast terminal UI (Rust) for CSV files with vim-style navigation and memory-mapped I/O, handling files larger than RAM with a small memory footprint for mouse-free data exploration in the terminal.

Personal Project

2024 - Present

Education

Utah State University

M.S. in Computer Science (AI Specialization)

All coursework complete; M.S. thesis in progress — khem, a prebiotic chemistry simulator in Rust. Focus: machine learning, multi-agent systems, distributed computing. Published in IEEE and ACM. Nominated for TA of the Year 2025.

Logan, Utah

Aug. 2025 - Present

Utah State University

B.S. in Computer Science

Graduated with honors (3.8+ GPA). Nominated for Undergraduate Researcher of the Year 2024.

Logan, Utah

Aug. 2021 - Dec. 2024
